AMBASSADOR

(Stoneville 4-B)

Due to the outstanding merit and the distinct botanical character possessed by this cotton, various Experiment Stations and the Cotton Variety Registration Committee appointed by the Association of Southern Agricultural Workers has recommended that this cotton deserves and should have a new name, in accordance with the Official Code of Nomenclature of the American Society of Agronomy. Therefore we have had this cotton registered under the name of AMBASSADOR.

Boll size—50 to 60 per pound of seed cotton.

Picking qualities—Excellent; bolls are large, round and open well.

Plants—Very dwarf, rather spreading.

Maturity—Very early, probably the earliest and quickest fruiting cotton known.

Stormproofness—Excellent, locks hold in boll well, does not string out.

Prolificness—Very prolific for a big boll cotton.

Foliage—Medium.

Lint Percentage—

| |
|------------------------|
| Hill land 35 to 38%. |
| Valley land 33 to 35%. |

Lint length—1 to 1-3/32 inch.

Ambassador is a selection from Stoneville No. 4, has a larger boll and is more prolific. It is an outstanding big boll cotton for very fertile soil. Records at Sikeston, Missouri, on the north edge of the Cotton Belt, show it highest in relative earliness of all strains in the tests. Its extreme earliness, combined with its big boll and dwarfness, make it a prime cotton for any section where these characteristics are essential.

It has made some excellent records in irrigated sections, and enormous yields may be expected from it on medium fertile or thin uplands, where fertilizers are used liberally, the rows narrowed, with reasonably thick spacing in the drill.

YOUR COTTON PICKERS WILL APPRECIATE THIS STRAIN

History of Stoneville Cottons

The original Stoneville strains, No. 1 and No. 2, were developed by Dr. H. B. Brown in 1923, while working for the Stoneville Pedigreed Seed Co. Lone Star 65 is thought by Dr. Brown to have resulted from an accidental cross between Texas Lone Star and Mississippi Station Trice.

The two original strains of Stoneville differed from each other according to the following description:

Stoneville No. 1: Dwarfy, medium spreading plant, big boll, very good lint percent, and very prolific for a big boll cotton. The No. 4, 4-A and 4-B are selections made by the Stoneville Pedigreed Seed Co., from Stoneville No. 1.

Stoneville No. 4-A was accepted as a new variety, **Ambassador**, in 1936 by the American Society of Agronomy

Stoneville No. 2: More vigorous and spreading plant than No. 1, smaller boll and seed, but very prolific and a good picker. No. 2-A, 2-B, 3, 5 and 5-A are all descendants of Stoneville No. 2, bred by Stoneville Pedigreed Seed Co.

The men who develop new and better strains of cotton are public benefactors and deserve your seed business. The Seed Breeders are in position to supply you with the very best seed of their strains at a reasonable price.
